

Open Source Guidance and Policy Creation

Who is it for?

Do you develop software which you then sell onto your customers? Do your developers use open source code? Not sure? We can help.

Why do you need it?

As part of our Open Source Guidance and Policy Creation services, our team of experts will work closely with you to create a best-practise procedure governing the use of open source code in your software. Your developers, your customers, your legal team will all know where you stand.

- Helps you to establish a more professional, transparent methodology
- Gives customers in highly regulated industries peace of mind and proof of risk control
- GDPR requires organisations to "ensure a level of security appropriate to the risk". Being able to demonstrate that you have software development compliance under control, will contribute to your customers' GDPR compliance.

What do you get?

Our ½ day workshop will introduce you to the key topics covered by an open source policy. We'll work with you to create a draft policy, which after completion, your developers will be able to adhere to with confidence.

- The confidence to make key decisions to guide future developments with reduced risk
- An established baseline for insourced developments and changes in personnel
- A key building block in the larger OpenChain process
